APPLICATION STATEMENT

The application of the Clinical Coverage Guideline is subject to the benefit determinations set forth by the Centers for Medicare and Medicaid Services (CMS) National and Local Coverage Determinations and state-specific Medicaid mandates, if any.

DISCLAIMER

The Clinical Coverage Guideline (CCG) is intended to supplement certain standard WellCare benefit plans and aid in administering benefits. Federal and state law, contract language, etc. take precedence over the CCG (e.g., Centers for Medicare and Medicaid Services [CMS] National Coverage Determinations [NCDs], Local Coverage Determinations [LCDs] or other published documents). The terms of a member's particular Benefit Plan, Evidence of Coverage, Certificate of Coverage, etc., may differ significantly from this Coverage Position. For example, a member's benefit plan may contain specific exclusions related to the topic addressed in this CCG. Additionally, CCGs relate exclusively to the administration of health benefit plans and are NOT recommendations for treatment, nor should they be used as treatment guidelines. Providers are responsible for the treatment and recommendations provided to the member. The application of the CCG is subject to the benefit determinations set forth by the Centers for Medicare and Medicaid Services (CMS) National and Local Coverage Determinations, and any state-specific Medicaid mandates.

BACKGROUND

Diabetes mellitus is characterized by hyperglycemia due to impaired pancreatic insulin secretion or inefficient use of insulin by the body. Members with insulin-dependent (type 1) diabetes require chronic treatment with exogenous insulin. To calculate the insulin dose needed to manage their blood glucose levels, these members perform self-monitoring of blood glucose (SMBG) using samples obtained by finger sticks; however, frequent SMBG may not detect all significant deviations in blood glucose, particularly in members with rapidly fluctuating glucose levels. As a result, some members who perform multiple daily finger sticks may fail to detect blood glucose excursions above or below the desired range, especially when glucose fluctuations occur at night.1

Diabetes cannot be cured, and treatment is focused on self-management education and training that is centered on self-care behaviors such as healthy eating, physical activities, and monitoring blood glucose to improve health outcomes and the patient’s quality of life. Self-management education improves HbA1c levels, and increased contact time with educators enhances the positive effect. It is a collaborative process in which diabetes educators help patients and those who are at risk for diabetes to gain the knowledge, problem-solving, and coping skills that are needed to successfully self-manage the disease and its related conditions.2

Guidelines published by the American Association of Clinical Endocrinologists (AACE) state that advances in blood glucose monitoring and continuous monitoring of interstitial glucose, along with the introduction of "smart" insulin pumps, provide clinicians and patients with powerful tools to monitor and adjust treatment regimens. The guidelines recommend arranging for continuous glucose monitoring for patients with type 1 diabetes with unstable glucose control and for patients unable to achieve an acceptable HbA1c level; continuous glucose monitoring is particularly valuable in detecting both unrecognized nocturnal hypoglycemia and postprandial hyperglycemia.3
POSITION STATEMENT

Applicable To:

☑ Medicaid – Kentucky

External insulin pumps are considered medically necessary if the Member:

1. Has a diagnosis of insulin dependent type I diabetes mellitus; AND

2. Completed a comprehensive diabetes education program. (This may include, but is not limited to, leading the Member to demonstrate the ability and commitment to comply with the regimen of pump care, frequent self-monitoring of blood glucose, and careful attention to diet and exercise, and has received appropriate training on pump usage); AND

3. Has been on a program of multiple daily injections of insulin (e.g., at least 3 injections per day) with frequent self-adjustments of insulin dose for at least 6 months prior to initiation of the insulin pump; AND

4. Member has been on an external insulin infusion pump prior and has documented frequency of glucose self-testing an average of at least 4 times per day during the month prior to enrollment; AND

5. Has an endocrinologist or physician experienced in providing insulin infusion therapy orders the insulin pump and states that he/she will monitor the members status while he/she uses the pump; AND

6. Has Provider documentation of a history of poor glycemic control on multiple daily injections of insulin, including a persistently elevated glycosylated hemoglobin level (HbA1C>7.0%). Additional history of poor control may be documented in the medical record, including but not limited to:
   - Widely fluctuating blood glucose levels before bedtime, OR
   - History of severe hypoglycemia (<60 mg/dL) or hyperglycemia (>300 mg/dL), AND/OR
   - Treatment of secondary diabetic complications requiring more extensive blood glucose control

Replacements

Medicaid. Insulin pumps must have a total coverage repair or replacement warranty for four (4) years. After four (4) years Medicaid will allow a request for a replacement.

Medicare. Replacement insulin pumps are included in coverage when there is documented frequency of glucose self-testing an average of at least 4 times per day during the 2 months prior to initiation of the insulin pump, and meets one or more of the following criteria (1 - 5) while on the multiple injection regimen:
   - Glycosylated hemoglobin level (HbA1C) greater than 7 percent
   - History of recurring hypoglycemia
   - Wide fluctuations in blood glucose before mealtime
   - Dawn phenomenon with fasting blood sugars frequently exceeding 200 mg/dL

History of severe glycemic excursions

CODING

CPT® Codes – No applicable codes.

Covered HCPCS Codes

A4225 Supplies for external insulin infusion pump, syringe type cartridge, sterileing , each
A4230 Infusion set for external insulin pump, non-needle cannula type
A4231 Infusion set for external insulin pump, needle type
A4232 Syringe with needle for external insulin pump, sterile, 3 cc (non-covered by Medicare)
A9274 External ambulatory insulin delivery system, disposable, each, includes all supplies and accessories (non-covered by Medicare)
E0784 External ambulatory infusion pump, insulin
S9145 Insulin pump initiation, instruction in initial use of pump (pump not included) (non-covered by Medicare)
Covered ICD-10 CM Diagnosis Codes

- **E08.00-E08.01** Diabetes mellitus due to underlying condition with hyperosmolarity with coma (E08.01)
- **E08.10-E08.11** Diabetes mellitus due to underlying condition with ketoacidosis with coma (E08.11)
- **E08.21-E08.29** Diabetes mellitus due to underlying condition with kidney complications (E08.29)
- **E08.311-E08.319** Diabetes mellitus due to underlying condition with unspecified diabetic retinopathy without macular edema (E08.319)
- **E08.3211-E08.3219** Diabetes mellitus due to underlying condition with mild nonproliferative diabetic retinopathy with macular edema, right eye (E08.3211)
- **E08.3291-E08.3299** Diabetes mellitus due to underlying condition with mild nonproliferative diabetic retinopathy without macular edema, right eye (E08.3291)
- **E08.3311-E08.3319** Diabetes mellitus due to underlying condition with moderate nonproliferative diabetic retinopathy with macular edema, right eye (E08.3311)
- **E08.3391-E08.3399** Diabetes mellitus due to underlying condition with moderate nonproliferative diabetic retinopathy without macular edema, right eye (E08.3391)
- **E08.3411-E08.3419** Diabetes mellitus due to underlying condition with severe nonproliferative diabetic retinopathy with macular edema, right eye (E08.3411)
- **E08.3491-E08.3499** Diabetes mellitus due to underlying condition with severe nonproliferative diabetic retinopathy without macular edema, right eye (E08.3491)
- **E08.3511-E08.3519** Diabetes mellitus due to underlying condition with proliferative diabetic retinopathy with macular edema, right eye (E08.3511)
- **E08.3521-E08.3529** Diabetes mellitus due to underlying condition with proliferative diabetic retinopathy with traction retinal detachment involving the macula, right eye (E08.3521)
- **E08.3531-E08.3539** Diabetes mellitus due to underlying condition with proliferative diabetic retinopathy with traction retinal detachment not involving the macula, right eye (E08.3531)
- **E08.3541-E08.3549** Diabetes mellitus due to underlying condition with proliferative diabetic retinopathy with combined traction retinal detachment and rhegmatogenous retinal detachment, right eye (E08.3541)
- **E08.3551-E08.3559** Diabetes mellitus due to underlying condition with stable proliferative diabetic retinopathy Unspecified eye (E08.3559)
- **E08.3591-E08.3599** Diabetes mellitus due to underlying condition with proliferative diabetic retinopathy without macular edema, right eye (E08.3591)
- **E08.36** Diabetes mellitus due to underlying condition with diabetic cataract
- **E08.37X1-E08.37X9** Diabetes mellitus due to underlying condition with diabetic macular edema, resolved following treatment, right eye (E08.37X1)
- **E08.39** Diabetes mellitus due to underlying condition with other diabetic ophthalmic complication
- **E08.40-E08.49** Diabetes mellitus due to underlying condition with diabetic neuropathy, unspecified (E08.40)
- **E08.51-E08.59** Diabetes mellitus due to underlying condition with diabetic peripheral angiopathy without Gangrene (E08.51)
- **E08.610-E08.618** Diabetes mellitus due to underlying condition with diabetic neuropathic arthropathy (E08.610)
- **E08.620-E08.628** Diabetes mellitus due to underlying condition with diabetic dermatitis (E08.620)
- **E08.630-E08.638** Diabetes mellitus due to underlying condition with periodontal disease (E08.630)
- **E08.641-E08.649** Diabetes mellitus due to underlying condition with hypoglycemia with coma (E08.641)
- **E08.65** Diabetes mellitus due to underlying condition with hyperglycemia
- **E08.69** Diabetes mellitus due to underlying condition with other specified complication
- **E08.8** Diabetes mellitus due to underlying condition with unspecified complications
- **E08.9** Diabetes mellitus due to underlying condition without complications
- **E10.10-E10.11** Type 1 diabetes mellitus with ketoacidosis with coma (E10.11)
- **E10.21-E10.29** Type 1 diabetes mellitus with diabetic nephropathy (E10.21)
- **E10.311-E10.319** Type 1 diabetes mellitus with unspecified diabetic retinopathy with macular edema (E10.311)
- **E10.3211-E10.3219** Type 1 diabetes mellitus with mild nonproliferative diabetic retinopathy with macular edema Right eye (E10.3211)
- **E10.3291-E10.3299** Type 1 diabetes mellitus with mild nonproliferative diabetic retinopathy without macular edema Right eye (E10.3291)
E10.3311-E10.3319  Type 1 diabetes mellitus with moderate nonproliferative diabetic retinopathy with macular edema
Unspecified eye (E10.3319)

E10.3391-E10.3399  Type 1 diabetes mellitus with moderate nonproliferative diabetic retinopathy without macular edema
Unspecified eye (E10.3399)

E10.3411-E10.3419  Type 1 diabetes mellitus with severe nonproliferative diabetic retinopathy with macular edema
Right eye (E10.3411)

E10.3491-E10.3499  Type 1 diabetes mellitus with severe nonproliferative diabetic retinopathy without macular edema
Unspecified eye (E10.3499)

E10.3511-E10.3519  Type 1 diabetes mellitus with proliferative diabetic retinopathy with macular edema
Unspecified eye (E10.3519)

E10.3521-E10.3529  Type 1 diabetes mellitus with proliferative diabetic retinopathy with traction retinal detachment involving the macula right eye (E10.3521)

E10.3531-E10.3539  Type 1 diabetes mellitus with proliferative diabetic retinopathy with traction retinal detachment not involving the macula unspecified eye (E10.3539)

E10.3541-E10.3549  Type 1 diabetes mellitus with proliferative diabetic retinopathy with combined traction retinal detachment and rhegmatogenous retinal detachment right eye (E10.3541)

E10.3551-E10.3559  Type 1 diabetes mellitus with stable proliferative diabetic retinopathy unspecified eye

E10.3591-E10.3599  Type 1 diabetes mellitus with proliferative diabetic retinopathy without macular edema
Unspecified eye (E10.3599)

E10.36  Type 1 diabetes mellitus with diabetic cataract

E10.37X1-E10.37X9  Type 1 diabetes mellitus with diabetic macular edema, resolved following treatment
Right eye (E10.37X1)

E10.39  Type 1 diabetes mellitus with other diabetic ophthalmic complication

E10.40-E10.49  Type 1 diabetes mellitus with diabetic neuropathy, unspecified (E10.40)

E10.51-E10.59  Type 1 diabetes mellitus with diabetic peripheral angiopathy without gangrene (E10.51)

E10.610-E10.618  Type 1 diabetes mellitus with diabetic neuropathic arthropathy (E10.610)

E10.620-E10.628  Type 1 diabetes mellitus with diabetic dermatitis (E10.620)

E10.630-E10.638  Type 1 diabetes mellitus with periodontal disease (E10.630)

E10.641-E10.649  Type 1 diabetes mellitus with hypoglycemia with coma (E10.641)

E10.65  Type 1 diabetes mellitus with hyperglycemia

E10.69  Type 1 diabetes mellitus with other specified complication

E10.8  Type 1 diabetes mellitus with unspecified complications

E10.9  Type 1 diabetes mellitus without complications

Coding information is provided for informational purposes only. The inclusion or omission of a CPT, HCPCS, or ICD-10 code does not imply member coverage or provider reimbursement. Consult the member’s benefits that are in place at time of service to determine coverage (or non-coverage) as well as applicable federal/state laws.
